Project Title	Personalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed solution is an AI-powered networking assistant that helps students and professionals generate personalized conversation starters based on their profile and event description. It also verifies generated facts using the Wikipedia API to improve networking confidence.

Project Overview	
Objective	To help users generate personalized networking conversation starters using AI and fact verification.
Scope	Develop a web application using Streamlit and FastAPI that analyzes event descriptions, generates conversation starters, verifies facts, and stores interaction history.
Problem Statement	
Description	Many students struggle to start conversations and build professional connections during networking events.
Impact	Solving this problem improves networking confidence, communication skills, and professional opportunities.

Proposed Solution	
Approach	Use DistilBERT to analyze event themes, GPT-2 to generate conversation starters, and Wikipedia API for fact verification.
Key Features	- Personalized conversation starters - Event theme analysis - Fact verification using Wikipedia

	- Conversation history logging - Streamlit web interface

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Intel Core i3/i5 or higher CPU
Memory	RAM specifications	8 GB RAM (Minimum)
Storage	Disk space for data, models, and logs	10 GB Free Disk Space
Software		
Frameworks	Python frameworks	FastAPI, Streamlit

Libraries	Additional libraries	Transformers, Wikipedia API, Pytest, httpx
Development Environment	IDE	Visual Studio Code, Python 3.11
Data		
Data	Source, size, format	User profiles, event descriptions, conversation history (JSON/SQLite)
